

## Best Practice II

### **Title of the Practice:**

### **STUDENTS' SEMINAR -AN OUTCOME BASED PEDAGOGICAL TOOL**

#### ***Objectives of the Practice:***

Today's education is undergoing a paradigm change away from input-output focused education and toward outcome-based education. What matters is how much the pupils learn rather than how much we educate them. As a result, the institution has taken steps to develop teaching-learning methodologies from the perspective of students and how they will benefit them in their future studies/jobs. In this context the arrangement of students' seminar has got special attention in our college. Every department in our college has become enthusiastic about hosting a students' seminar inconspicuously meant for the students. The main objectives of students seminar are Active Learning, Critical Thinking, improvement of communication skills, to fetch depth of understanding and preparation for real world situations.

#### ***The context***

Outcome-based education has brought its own set of issues to India's higher education industry, particularly given the country's low gross enrolment ratio in comparison to other countries. Conducting students' seminar has some essential components. These are using ICT, workshops, watching online videos, using online platforms, and resolving challenges through conversations. The education system is no more out of the globalization process in every sector all over the world and the components of students' seminar mentioned above are essential parameter of this globalization process. Consequently any student who is going to deliver lecture must be expert enough in ICT, online/offline platforms or conversation skills. Thus, quality of education and employability both become compatible with the job market under present era globalised economy. A teacher also has to educate himself in all these time oriented modern fields for bringing perfection in the students' seminar. So, such seminar actually becomes platform of both-way learning process.

#### ***The Practice***

In our college Sanskrit, History, Philosophy, English, Hindi, Political Science, Physics, Chemistry and other departments have arranged students' seminar time and again in different academic sessions (Link is provided for full descriptions of the Seminars). Needless to say all these seminars received grand response of the students fulfilling their targets.

The students' seminar really helped a lot to differentiate between slow learners and advanced learners through interactive meetings, class question-and-answer sessions, formative evaluations, and academic counseling. The advanced learners were encouraged to participate in contests,

creative writing, and the processing of their research-oriented thinking in many dimensions, while the slow learners were given special attention through remedial sessions and help outside of class hours.

Seminar is a place where students get engaged in discussions, ask questions, and present their ideas. Naturally Seminars enhance power of critical thinking and communication skill. In such collaborative learning environment depth of understanding is also augmented. We have experienced that the mental inertia among students become gradually become banished. They learn essential skills for success in many career paths and become smarter in handling real life problems.

In any students' seminar, students act as teachers in the classroom with complete authority. They make group discussions, debates, explain their views and utilise power-point presentation techniques. Each student is encouraged to express their intellectualism in such seminars. Based on their overall performance, First Prize, Second Prize and Third Prize are given to the respective winners in a programme organized on College Foundation Day.

Every subject has its own inner philosophy. Without learning that philosophy learning of any subject is incomplete. Every subject has its own applicability in its own style and it should be guided by development with human face. In this way understanding pure science and understanding social science and thereby understanding people's needs are no different. Both have a responsibility towards society or community.

In an academic setting, the majority of these students are encouraged to choose and explore societal topics, particularly those that are contentious. Students are able to think deeply and discuss various points of view on these socially conscious themes. Students who successfully lead seminars will change their mindset, gain confidence, and have the ability to influence others. When a seminar is first being organized, it is important for the lecturer to help the students become leaders. Later on, while students are consulting with other members during seminars, the instructor helps them formulate questions that would be effective. In order to foster the social contacts required to build and strengthen communities, students might engage in a variety of activities.

Thus, it makes sense to coordinate and enhance curriculum development, student co-curricular activities, and pedagogical strategies in order to foster a more engaged and learning-friendly community.

## **Evidence of Success**

Low socio-economic backgrounds make up the majority of Kharagpur College's student body. In their views and hopes for their jobs in the future, they are naturally timid with low level of ambition. We have this point in mind throughout every student lecture. During these seminars we deliberately cover various career pathways related to respected fields. We've noticed as a result that they become courageous, inspired and encouraged. Consequently this bravery has shown to be helpful in passing numerous examinations at the National level. Students cleared JAM examinations with All India Ranks: From 2018 to 2020, 15 students of different science departments have cleared the JAM examinations with good All India ranks, including the top ten ranks in India by three students. In the year 2021, total 10 students have cleared the JAM examinations with all India ranks.

- Students placed for higher studies in IITs, IISER, Banarus Hindu University(BHU), University of Calcutta, The University of Burdwan and other institutes of national importance
- Students have participated in poster competitions; quiz competitions, presentations and other online events organized by external agencies and also won prizes:
- Student project was selected for CSIR summer research training programme in 2020
- The performance of students in university examinations has improved significantly from 2018 to 2020

### ***Problems Encountered and Resources Required***

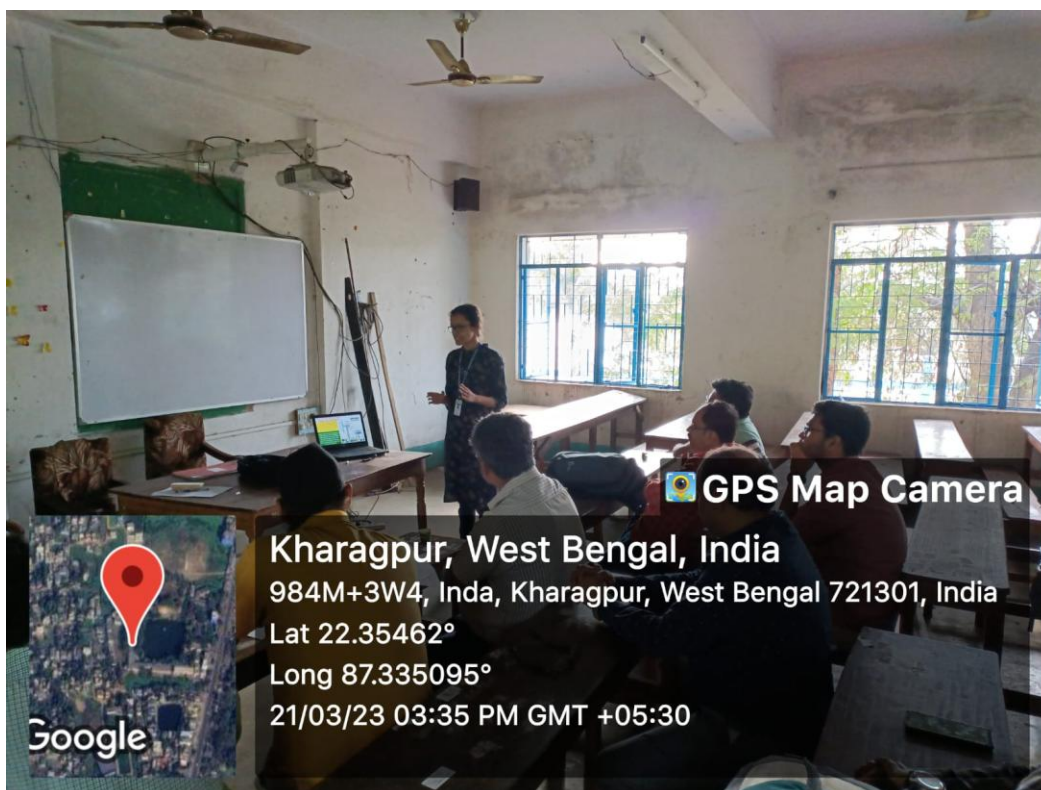

- Because the affiliating university takes so long to perform the semester examination and start classes for the next semester, the teaching-learning activities are occasionally hampered.
- The institution faces the problems of funding for conversion of more classrooms into the smart classroom and the administration has applied for renovation and up gradation of laboratories and classrooms
- Digitization of library and e-resources has also been applied under the RUSA scheme by the institution
- Procurement of more computers is required to improve the student: computer ratio
